

WATCH WATER UAE | TECHNICAL OVERVIEW

AquaPredict

AquaPredict is engineered within the Systems technology platform. Watch Water systems combine media, housings, vessels and treatment stages into POU, POE and specialist configurations. A system page therefore covers both the treatment function and the hydraulic, installation and service requirements needed by an integrator.

TREATMENT FOCUS

- 01 Point-of-use treatment
- 02 Point-of-entry treatment
- 03 Scale and contaminant control
- 04 Replaceable filter configurations
- 05 Commercial building water
- 06 OEM and integrator projects

TECHNICAL WORKFLOW

- 01 Specify: Define source-water quality, target water, peak flow, duty, pressure and installation constraints.
- 02 Configure: Select treatment stages, vessel or housing format, connections and service capacity.
- 03 Install: Provide isolation, bypass, drainage, sampling and access for safe commissioning and maintenance.
- 04 Service: Monitor performance and replace media or elements at the defined water-quality or capacity endpoint.
